

Web Design & Content Creation

Web Design With Drupal

Drupal is **free, open-source software** that allows you to **simply enter your content** - news, blogs, F.A.Q's - and let Drupal take care of the details. Once it's set up, your site's entire design can be changed with a checkbox. Dynamic lists **update automatically** to reflect changes. If your website changes often, you need a CMS.

If you've tried your hand at web design - or updated an existing web site - before Content Management Systems, you know how difficult it can be to sift through pages and pages of markup to find what you're looking for. Drupal's advantage is having the **look and feel of a website** with the easy-to-update **simplicity of a blog**.

Copywriting

Like a clean suit and confident demeanor, polished writing projects a **professional image**. Don't waste your marketing budget and valuable customer contacts on ineffectual content - grab readers and turn them into customers with business writing that works as hard as you do.

Working with a freelancer offers you the **flexibility** to decide how much help you want. For as many (or as few) projects as you like, I can:

- Compose **entirely original copy**, custom-fitted to the project (see [samples](#))
- Guarantee a clean, professional image by **proofreading** existing copy
- Keep readers' eyes glued to the page by **improving clarity and flow** in existing copy

If you already have a website and feel like it could be working harder for your company, or if you are considering a website or other project and want to discuss the possibilities, [contact me](#) for a **free estimate**.
